

Richard Bonsu

Platform Engineer | AWS . Kubernetes . Terraform . CI/CD . AI-Agentive Workflows

Chicago, IL | richardbonsu09@gmail.com | 872-369-4706 | linkedin.com/in/richardbonsu | richardbonsu.com

SUMMARY

Platform engineer with 6 years running production infrastructure — from Hyatt's enterprise AWS environment to an EKS platform at Innovid (8+ clusters provisioned via Terraform over time), a connected-TV advertising platform. Built the Innovid platform for self-service by design: developers deploy, observe, and debug their own services — no ticket to DevOps required. Builds and runs agentive workflows (Claude Code, custom skills, Jira MCP), PR-gated against production infrastructure across 30 repos.

EXPERIENCE

Platform Engineer — Innovid, Chicago, IL

Nov. 2022 – Present

- Shipped an AI PR-review agent (a customized Claude Code GitHub Action with a Jira MCP integration) across 30 repos, catching requirement gaps and exposed secrets before merge
- Built log-diagnostics, a Claude Code skill that traced a production OOM-kill in one command, replacing what had been a 20-minute manual Kibana/kubectl dive
- Provisioned 8+ EKS clusters via Terraform over time, with autoscaling — replacing manual cluster setup
- Wired up a centralized EFK (Elasticsearch, Fluentd, Kibana) logging platform with S3 archival across 10 services, replacing scattered per-service log access
- Rolled out workloads through ArgoCD with auto-sync and self-heal enabled, supporting 45 deploys/week and eliminating manual deployment steps
- Set up Prometheus/Grafana alerting on memory/CPU thresholds — caught a sustained memory climb on a production service and resolved it same-day, before it affected customers

Platform Engineer — Hyatt Corporation, Chicago, IL

Sept. 2020 – Oct. 2022

- Automated a GitHub Actions CI/CD pipeline, replacing manual app prep, deployment, and post-deploy validation — cutting deploy time from 30 minutes to 5 minutes and making releases consistent
- Migrated logging off CloudWatch to an EFK stack, adding full-text search across services CloudWatch didn't support
- Hardened AWS IAM policies across 8 application and infrastructure roles, removing 30% of granted permissions to enforce least privilege and reduce the blast radius of a compromised credential or workload
- Tuned Grafana alert thresholds to cut noisy, duplicate pages for the same incident

SKILLS

AWS: EKS, EC2, VPC, IAM, S3, Secrets Manager

Infra & Containers: Linux, Docker, Kubernetes

IaC & Delivery: Terraform, Git, GitHub Actions, ArgoCD

Observability: Prometheus, Grafana, CloudWatch, EFK (Elasticsearch, Fluentd, Kibana)

AI/Agentive: Claude Code, Custom AI Skills, Jira MCP, Context Engineering (CLAUDE.md/AGENTS.md), AI-Assisted Incident Triage

Scripting: Bash, Python

EDUCATION & CERTIFICATIONS

- Bachelor's in Construction Technology Education — University of Education, Winneba (Ghana)
- Higher National Diploma in Building Technology — Kumasi Technical University (Ghana)
- CKAD (Certified Kubernetes Application Developer)
